

STARTER

Removal & Installation (With 4-Speed Automatic 01M Transaxle & 5-Speed Manual 02J Transaxle)

1. Disconnect negative battery cable. Remove battery, and battery carrier. See **Fig. 2**.
2. Disconnect all wiring from starter solenoid. Remove starter cable from retainer. Remove starter wiring from guides. Remove guides.
3. Raise and support vehicle. Remove noise insulation panel. See **Fig. 3**. Remove left-side insulation panel. See **Fig. 4**. Remove brackets/retainers securing power steering pressure line. Place power steering pressure line aside.
4. Remove bolts securing starter. See **Fig. 5**. Remove starter. To install, reverse removal procedure. Tighten starter mounting bolt/nuts to specification. See **TORQUE SPECIFICATIONS**.

Removal & Installation (With 5-Speed Automatic Transaxle, 09A)

1. Disconnect negative battery cable. Remove engine cover. Disconnect intake hose, wiring harness connector, and hose from Mass Air Flow (MAF) sensor. Remove screws securing air filter housing assembly. Remove air filter housing assembly.

**CAUTION: DO NOT remove screw (2) from shifter lever cable end. See Fig. 6 .
DO NOT kink shifter cable while removing.**

NOTE: Ensure transaxle gearshift lever is in "Park".

2. Remove bracket (arrow) from transaxle. See **Fig. 6** . Using a flat-bladed screwdriver, unclip shifter cable from holder, and set aside.
3. Remove starter solenoid plastic protective cover. See **Fig. 7** . Remove starter solenoid nut, and cable from starter solenoid. Disconnect starter solenoid wiring harness connector.
4. Remove 2 bolts securing starter to transaxle. See **Fig. 8** . Lift starter up and out from transaxle. To install, reverse removal procedure. Tighten starter mounting bolt/nuts to specification. See **TORQUE SPECIFICATIONS** .
