Passenger Air Bag Module

Removal

WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

WARNING: Carry a live air bag module with the air bag and deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

WARNING: Do not set a live air bag module down with the deployment door face down. This will reduce the risk of injury in the event of an accidental deployment.

WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment which can result in personal injury.

WARNING: Air bag modules with discolored or damaged deployment doors must be installed new, not repainted.

WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and perform the diagnostic procedure again.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Open the glove compartment to access the passenger air bag module bolts.

3. Remove the two passenger air bag retaining bolts.

4. CAUTION: Do not handle the passenger air bag module by grabbing the edges of the deployment doors.

Placing one hand in the glove compartment, push the passenger air bag out enough to access the electrical connector.

5. Disconnect the passenger air bag module electrical connector.
1. Connect the passenger air bag module electrical connector.

2. Position the passenger air bag module into the instrument panel.

3. Install the passenger air bag module bolts.

4. Close the glove compartment.

5. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
