Connect

1. Inspect the fitting and the tube for damage.
   Remove any dirt or obstructions.

2. Apply a light coat of clean engine oil to the male tube end.

3. Insert the tube into the fitting and push them together until a click is heard.

Disconnect

⚠️ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠️ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before servicing or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

⚠️ CAUTION: Do not use any tools. The use of tools may cause a deformity in the clip components which may cause fuel leaks.

1. Relieve the fuel pressure. For additional information, refer to Fuel System Pressure Release in this section.

2. Push the tab to release the connector and remove the tube from the connector.

3. Pull on the connection to make sure it is fully engaged.

4. Pull on the connection to make sure it is fully engaged.
