
Special instructions for programmable settings

Block calls (Caller ID subscribers only)

This feature allows the unit to reject calls from specified phone numbers that you do not want to answer such as junk calls. You can store up to 20 phone numbers in the block call list by using the caller list or by entering the numbers directly.

When a call is received, the unit rings for a short time while identifying the caller. If the phone number matches an entry in the block call list, the unit sends out a busy tone to the caller, then disconnects the call.

Important:

- You must store the phone number with an area code (10 digits) in the block call list.
- When the unit receives a call from a number that is stored in the block call list:
 - while receiving the call, “**Caller blocked**” will be displayed and the number will not be displayed.
 - when the call is disconnected, the number is logged in the caller list (page 32) with ☒.

Night mode

Night mode allows you to select a span of time during which the handset will not ring for outside calls. This feature is useful for instances when you do not want to be disturbed, for example, while sleeping. Night mode can be set for each handset.

Important:

- Set the date and time beforehand (page 16).
- We recommend turning the base unit ringer off (page 18) and call screening
